

Our vision

■ Improve well-being by making communications simple

At Buzzinbees we believe that:

- communications play a major role in the well-being of humankind; we are proud to contribute to such progress,
- communicating must be simple and easy; this starts with ourselves: despite our sophisticated technology, our language remains simple and direct, even with specialists,
- communication favors long term relationships and trust; we never let our customers nor our employees down,
- communications must be honest; we do not get into bad deals and we make sure our employees and our customers understand how we manage to be financially sound while providing best value for money.

Our mission

■ **We provide equipment and software vendors** with software that enables operators to make communication simple while making the most of their networks.

Our history

Telecommunication operators and equipment providers worldwide have used Hewlett-Packard carrier grade signaling and service control platforms since **1988**. HP's portfolio underwent major enhancements and sometimes redesigns to always stay atop technology and network evolutions (IMS, SIP, Diameter...). We created Buzzinbees to evolve and support this critical technology through a strategic licensing agreement with HP.

We recruited a dream team of architects and engineers, each with at least 15 years of experience in the communications field. Our founders have a proven track record of growing and profitably running communication software business for over 20 years.

Our coverage

■ **Buzzinbees supports an installed base of over 7,000** deployed platforms in nearly all telecommunication networks of the world. 24 hours a day, every day of the year. These platforms perform critical functions covering most acronyms of the telecom core network: ADD, charging gateway, CSCF, EIR, GMLC, HLR, HSS, LNP, MNP, SCP, SIP registrar, SMSC, STP, ...

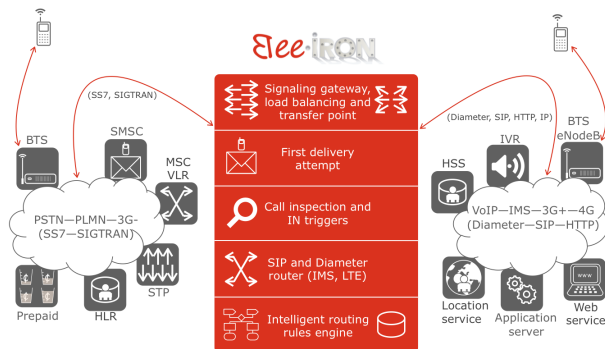

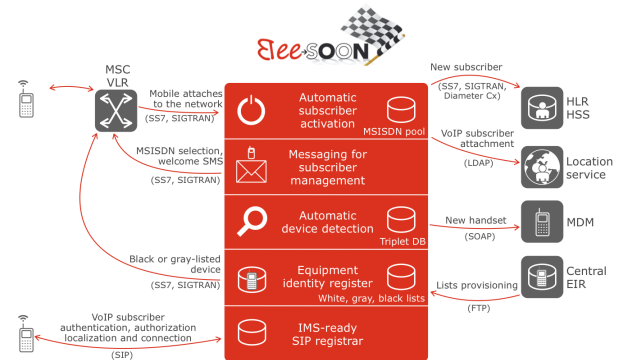

If you are with an operator which doesn't run a core network application on our platforms, please contact us at [✉ sales@buzzinbees.com](mailto:sales@buzzinbees.com) so that we can point you to one of our channel partners.

Our difference

Beyond providing best-in-class software, we are proud to speak the language of our customers. We understand messaging, charging, routing, subscriber management, SIM provisioning... and we assist our partners to build optimized solutions for operators.

For instance, our *Bee-SOON* product supports automatic device detection, dynamic SIM provisioning, basic application to person messaging, equipment identification register.

We brought these functions together into one product because we understand how they can help our partners deliver fully automatic subscriber activation.

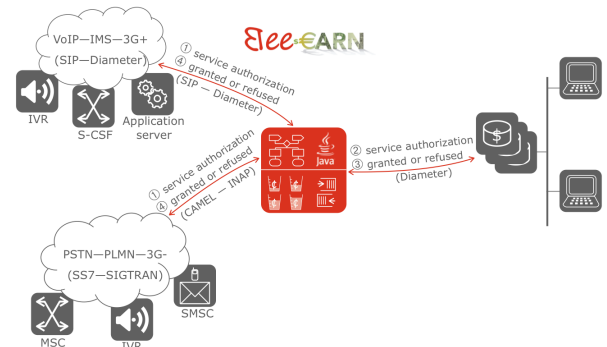

Our *Bee-IRON* product acts as a powerful signaling transfer point and gateway, with full high-availability and linear scalability. It supports all signaling protocols ranging from legacy to those not even deployed yet.

And atop these fairly standard features, it supports SMS first delivery attempt, SIP load balancing, SIP registrar and many other functions. We built this powerful combo to

allow our partners leverage the strategic location of signaling gateways and provide capabilities that blend well with routing functions.

And our *Bee-EARN* node provides for a full charging gateway function on top of a standard Java EE environment that provides standard interfaces and stays clear of JAIN dialects.

■ **This ability to speak the language of our customers** leads us to work hand in hand with them and adapt our products to suit their needs. Our roadmaps combine market driven product evolutions with requirements coming directly from our customers. Our flexible development methodology allows us to always provide a solution to meet specific customer requirements while keeping our code base clean.

Our offices

Our offices are headquartered in the Alps, near Grenoble.
Our engineering team works in our Sophia Antipolis campus, near Nice.
You can reach us at contact@buzzinbees.com.

If you look us up in the registry of commerce, you will find the following information:
